Warsaw

20 October 2009

Dear Sirs,

We are happy to inform you about the successful completion of the process of certification of sprinkler tanks manufactured by our company that was carried out in FM APPROVALS. As of 9th October 2009, **"MOSTOSTALEX"** steel sprinkler tanks received the **"FM APPROVED"** status and our company has been entered into the list of certified manufacturers.

In an effort to meet the needs of the Polish market and the requirements of FM GLOBAL, we submitted the series of types of tanks in two structural variants, including a seismic loading variant. In this manner, **"FM APPROVED" "MOSTOSTALEX" SPRINKLER TANKS** became **NO. 1 IN EUROPE**, as they allow both for seismic loading of their structure according to the 500-years zone and for snow loading of 1.2kN/m², which covers almost the entire territory of Poland and the majority of Central European countries, according to FM guidelines.

Over 10 years of experience in the industry and hundreds of realized deliveries and assemblies of sprinkler tanks allowed us to create a **PERFECT PRODUCT** and to complete successfully the difficult task of FM certification. **"MOSTOSTALEX"** tanks are designed by Polish engineers and constructed of components produced and purchased in Poland.

Within the certification programme, we received 2 separate reports and **FM APPROVALS** of a "tank without seismic loading" and a "tank with seismic loading for the 250-years zone (including the 500-years zone)". Copies of both reports can be found on our page at the address:

WWW.MOSTOSTALEX.PL.

All the doubts concerning sprinkler tanks – FM approved tanks, undefined scopes of deliveries and liabilities, designed for Western-European foundation conditions (inadequate for local requirements) – can now be solved by selecting an **"FM APPROVED" tank MADE IN POLAND**.

We are at your disposal and we invite you to get acquainted with our offer.

Sincerely yours,
MOSTOSTALEX

Marek MARZOCH
